Apple's Migration Assistant has Windows to download the Mac as an EXE file, and you'll need to install it on the PC from which you want to grab files. Although the app is about 5MB in size, the download took longer than expected. The installation was smooth though, as there was a native installer present. To go to work, both Mac and PC must be on the same network. To start the process, you need to open a migration assistant located on your Mac in the App -- Utilities folder. You can transfer data from a COMPUTER, another Mac, a time machine backup, or another disk to another Mac using an Ethernet cable. After selecting an option with a Mac or PC, you should see a computer icon with your computer's name displayed. As you continue to set up, you'll see a password that needs to be checked, which is also visible on your computer. Now you'll have the option on mac to select items to migrate. By default, all available folders are checked and the size of each folder is displayed. After we chose the folders we wanted to move from our Windows 7 machine to our Mac, the app performed the transfer seamlessly. Apple's Windows Migration Assistant for Mac works without any hiccups and does its job well. This is a great download for any user who has to transfer a few large folders from another computer to their Mac on the same network. Apple's Windows for Mac migration assistant allows users to transfer network files from their PC to their Mac and offers all the ease of use and efficiency you'd expect from a Mac tool. Apple's Migration Assistant has Windows to download the Mac as an EXE file, and you'll need to install it on the PC from which you want to grab files. Although the app is about 5MB in size, the download took longer than expected. The installation was smooth though, as there was a native installer present. To go to work, both Mac and PC must be on the same network. To start the process, you need to open a migration assistant located on your Mac in the App -- Utilities folder. You can transfer data from a COMPUTER, another Mac, a time machine backup, or another disk to another Mac using an Ethernet cable. After selecting an option with a Mac or PC, you should see a computer icon with your computer's name displayed. As you continue to set up, you'll see a password that needs to be checked, which is also visible on your computer. Now you'll have the opportunity on a Mac elements for migration. By default, all available folders are checked and the size of each folder is displayed. Once we the folders we wanted to transfer from our Windows 7 machine to our Mac, the app performed the transfer seamlessly. Apple's Windows Migration Assistant for Mac works without any hiccups and does its job well. Languages ČeštinaDanskDeutschΕλληνικάEnglishEspañol (Chile)Español (Colombia)EspañolEspañol (America)SuomyFrwatzhratzMaticMasha Indonesialtalo 日本語한국어NederlandNskPolskiPortu You'll like to see your contacts 简体中文繁體中文 email accounts and more from your computer and puts those files in appropriate places on your Mac. Before you start: Use these steps to make sure that the migration runs smoothly. Make sure Windows is up to date. The migration assistant works with Windows XP later. Make sure you know the name and password of the admin account on your computer. Connect Your Mac and PC to the same network, such as your home Wi-Fi network. You can also connect the Ethernet cable between the Ethernet port on your Mac and your computer to create a direct network connection. Use the check drive utility (chkdsk) on your computer to make sure there's no problem with the Windows drive. Select Start> Run Type cmd in the Run window and click Enter. Type chkdsk in the team window and click Enter. If check disk reports that you've detected problems, enter chkdsk drive: /F and press Enter (where the drive is the letter representing your Windows start-up drive, such as d:). Repeat this process until check disk reports it. If you can't clear the disk problem, you may need to process your computer before migrating to Mac. How to move data from PC to Mac: Use these steps to transfer data from THE COMPUTER to Mac. Setup Assistant automatically opens when you first set up the Mac. If you're already on the Mac set-up, open the migration assistant from the Utility folder to the mac. On the Mac, keep an eye on the hints on the screen until you get to the migration assistant panel. Choose the Windows PC option. When requesting, enter the administrator's name and password. Click Continue to close any other apps that are open. Choose your computer from a list of available computers in the migration window on your Mac and then wait for your PC to show the password displayed on your Mac. Click Continue on your computer and Mac after you see the same password displayed on both computers. Your Mac drives on your computer to create a list of information to migrate. When Scan completed, select the information you want to transfer to your Mac and click Continue. You can watch the progress and calculation of the time left on both Windows PCs and macs. The migration assistant tells you when the migration will be completed. After you migrate, you can close your migration assistant on your computer and log in to a new user account on your Mac. When you first log in to a user's account that has migrated from your computer, you are asked to set up a password. You can use the same password that you used on your computer, or create a new password. You can get tips on setting up your password when choosing good passwords in OS X. Use the Windows Migration Assistant to transfer photos, documents, and other data from Your Windows to mac. Windows Migration Assistant transfers your contacts, calendars, email accounts, and more from your PC. It migrates this data to appropriate locations on your Mac. Once you've transferred data to your Mac, authorize your computer to purchase from the iTunes Store. It's important to authorize before you sync or play content that you're downloading from the iTunes Store. If you're going from one Mac to another Mac, follow the steps to move your content to your new Mac. To prepare for a smooth migration: make sure That Windows is out of date. The Migration Assistant works with Windows 7 later. Make sure you know the name and password of the admin account on your computer. Connect Your Mac and PC to the same network, such as your home Wi-Fi network. Or connect the Ethernet cable between the ports on the mac and the PC to create a direct network connection. Some Mac models require an Ethernet adapter, such as the Belkin USB-C adapter for Gigabit Ethernet or the Apple Thunderbolt adapter for the Gigabit Ethernet Adapter. If you're using Microsoft OneDrive on your computer, follow Microsoft's OneDrive non-installation instructions before you get started. You can reinstall OneDrive after the migration is over. Then use check disk (chkdsk) on your computer to make sure there's no problem with the Windows hard drive: click start and then press Run. Enter cmd and click Enter. Command Prompt opens. On request, type chkdsk and click Enter. If the utility reports that it has detected problems, enter the following where the drive is a letter representing your Windows start-up drive, such as D: chkdsk drive: /F Press Enter. Enter Y on request, restart the computer. Repeat until check disk reports. If the utility can't fix all the problems it finds, you may need to get your computer to be serviced. Then reuse the data to the Mac. This section will guide you through migration, post-migration, and what to do if the steps don't work for you. Download and install the appropriate migration assistant on your computer based on the macOS version on your Mac: Stop any open Windows apps. Open the Windows Migration Assistant and then click Continue. Start the Mac. Setting up the assistant automatically opens the first time you turn on the mac. If you've already your Mac, an open migration assistant that is in the App Folder Utility folder. On the Mac, keep an eye on the hints on the screen until you get to the migration assistant panel. Select the option to transfer information from the PC with Windows, and then click Continue. When requesting, enter the administrator's name and password. Click Continue to close any other open apps. In the Mac migration window, select your computer from a list of available computers. Then wait until your computer shows the same password that your Mac shows. When both computers display the same password, click Continue on your computer and Mac. Your Mac scans disks on your computer to create a list of information to migrate. When the scan is complete, select the information you want to transfer to the mac and click Continue. Find out about some of the data you can share. You can watch the progress and the estimated time remaining on both the PC and the Mac. They tell you when the migration is complete. When the migration is over, close the Windows migration assistant on your computer. Then log in to a new user account on your Mac. When you first log in to a user's account transferred from your computer, you are asked to set up a password. You can use the same password that you used on your computer, or create a new password. After you log in to the user account you've migrated to, your computer is for iTunes Store purchases. It's important to authorize before you sync or play content downloaded from the iTunes Store. Get out of all the open apps on your computer and then try to migrate the content again. For example, you can click Alt-Tab to select an open app and then tap Alt-F4 to get out of it. If your computer doesn't show up in the setup assistant window or migration assistant on your Mac, make sure your computers are connected to the same network. You can create a network by connecting one Ethernet cable between your Mac and your PC. If that doesn't help, check the firewall software on your computer and turn it off. Firewall software can block network ports needed during migration. Once the migration is over, you can turn on the firewall software again. If the migration assistant doesn't open on your computer, turn off the antivirus software on your computer. Then try to reopen the migration assistant. Once the migration is over, you can turn on this software again. If you still can't successfully transfer your information, you can use an external drive or file sharing to manually copy important data to your Mac. The Migration Assistant lets you select the data to move to your Mac. Here's what moves for specific apps and data types: Email, contacts and Information Calendar Messages mail, email account settings, contacts and appointments move depending on which version of Windows you use and what accounts you have. Outlook Data from 32-bit versions of Outlook in Windows 7 and then move as follows: People switch to Contacts2 Appointments go to the calendar iMAP app and Exchange settings and messages go to the settings of the Pop Mail app and and go to Mail2 Windows Live Mail Data from Windows Live Mail to Windows 7, and then goes as follows: iMAP settings and messages go to Settings and Mail2 Windows Mail Data messages from Windows Mail to Windows 7, and then (except Windows 8) move as follows: iMAP settings and messages go to settings and Mail2 messages People switch to bookmarks of contacts from Internet Explorer , Safari for Windows, and Firefox go to Safari. The settings of the language and location settings, as well as custom desktop images, move to system preferences. The homepage of the web browser goes to Safari's preferences. Photos photos and other images are moved to the home folder. Then you can add them to the photos, or open the photos, and let it look for your Mac for photos to import. The iTunes Content Migration Assistant broadcasts your iTunes media as follows: music in the Apple Music app, videos in the Apple TV app, podcasts in the Apple Podcasts app and audiobooks in the Apple Books app. What happened to iTunes? Other Migration Assistant files also move these files: Files from the top-level folder of the user's home directory located in Windows or Program Files folders located on the Windows disk and other attached disks 1. The migration assistant doesn't support the 64-bit Outlook version. You can manually move Mail, Contacts, or Calendars from Outlook 2013 or Outlook 2016 by logging in and typing content on your Mac manually. 2. The Migration Assistant only transfers Mail or Contacts data to a registered Windows user. To transfer data from another user account, use Migration Assistant again while you've logged into another Windows account. Every time you migrate, your Mac creates a new user account.
